INTERNSHIP REPORT

ON

CYBER CRIME POLICE STATION HAVERI

Submitted in the partial fulfillment of the requirements for the award of the degree of

BACHELOR OF TECHNOLOGY

IN

COMPUTER SCIENCE AND CYBER SECURITY

Submitted By,

Siddanagouda Rudragouda Goudra(2403031260172)

2026-2027

DEPARTMENT OF COMPUTER SCIENCE AND CYBER SECURITY

Parul Institute of Engineering and Technology

Date: 06/05/2026
Ref. No.: —

To
The Cyber Cell Officer
Haveri District Police
Karnataka

Subject: Request for Internship Permission

Respected Sir/Madam,

This is to certify that **Mr. Siddanagouda Rudragouda Goudra** (Enrollment No: **2403031260172**) is a bonafide student of **B.Tech in Cyber Security** (Class: 4Cyber2) at **Parul University**, Limda, Vadodara.

He has expressed his interest in undergoing an internship/training at your esteemed organization, the **Cyber Cell, Haveri**. The institution has no objection to him undertaking this internship for the purpose of gaining practical knowledge and exposure in the field of cybersecurity.

We kindly request you to consider his application and provide him with an opportunity to learn under your guidance.

Thanking you.

Yours sincerely,

B. S. 126
Head of Department
CSE - Cyber Security
Parul Institute of Engineering & Technology

Haveri District Police

INTERNSHIP COMPLETION CERTIFICATE

This is to Certify that

Mr. Siddanagouda Rudragouda Goudra

Enroll:2403031260172

3rd Year, B.Tech Computer Science & Engineering (Cybersecurity)
Parul University, Vadodara, Gujarat

Has successfully completed an internship at the Cyber Crime Police Station Haveri, Haveri District Karnataka. During the period from 13-05-2026 to 11-06-2026. During this internship, the candidate gained hands-on practical exposure to cybercrime investigation, digital forensics, FIR documentation, malware analysis, case workflow management, and law enforcement procedures. The candidate has demonstrated dedication, commitment, and proficiency in assigned tasks and has successfully contributed to the operations of the CCPS.

Place: Haveri
Date: 11-06-2026

Deputy Superintendent of Police
Cyber Crime Police Station, Haveri
Haveri District, Karnataka

ABSTRACT

The internship at the Cyber Crime Police Station, Haveri provided valuable practical exposure to the field of cyber crime investigation, cyber security, and digital forensics. The internship was undertaken to understand the practical procedures followed by law enforcement agencies in detecting, investigating, and preventing cyber crimes. During the internship, different types of cyber crimes such as online financial fraud, phishing, identity theft, social media-related crimes, cyber harassment, and other technology-based offences were studied. Practical knowledge was gained about the use of various cyber crime investigation platforms and tools, including the National Cyber Crime Reporting Portal (NCRP), Cyber Police Portal, Samanvaya, and other applications used by law enforcement authorities. The internship provided an understanding of how cyber crime complaints are received, registered, verified, and processed for further investigation, along with the importance of analysing suspicious activities, transactions, accounts, and digital traces. Exposure was also gained to the fundamentals of digital evidence collection, preservation, examination, and documentation, including the handling of digital devices, electronic records, transaction details, call records, social media information, and other digital traces. The internship helped in understanding the importance of timely reporting, proper investigation procedures, coordination between law enforcement agencies and other organizations, confidentiality, and responsible handling of sensitive information. Overall, the internship provided a meaningful combination of theoretical knowledge and practical experience, helping to develop a better understanding of real-world cyber security challenges and cyber crime investigation methods. The knowledge and skills gained during the internship will be useful for further academic studies and for building a career in cyber security, digital forensics, and cyber crime investigation.

Keywords: Cyber Crime, Cyber Security, Cyber Crime Investigation, Digital Forensics, Digital Evidence, NCRP, Cyber Police Portal, Samanvaya, Online Financial Fraud, Cyber Investigation.

ACKNOWLEDGEMENT

I would like to express my sincere gratitude to all those who supported me throughout my internship journey and helped me successfully complete this report.

First and foremost, My sincere thanks go to **[Cyber Crime Police Station, Haveri]** for giving me the opportunity to intern at their esteemed organization. I am especially thankful to **[Deputy Superintendent of Police, CCPS Haveri]**, who mentored me during the internship and provided invaluable insights, encouragement, and technical guidance throughout my tenure.

I am immensely grateful to **Dr.Brijesh Vala** , Head of the Department of Computer Science And Cyber Security, for his constant encouragement and valuable support throughout the course of my studies and internship.

I would also like to extend my heartfelt thanks to **Dr. Vipul Vekariya** , Dean, PIET for his guidance and for facilitating the smooth conduct of the internship program. I am deeply thankful to the Management of **Parul Institute of Engineering and Technology** for providing me with the opportunity to undertake this internship as part of the academic curriculum. Their vision and commitment to practical learning have made this experience possible.

I would also like to acknowledge the support and encouragement of all the faculty members of the Department of Computer Science and Cyber Security, whose teachings laid the foundation for this practical learning.

Last but not least, I thank my family and friends for their continuous moral support and encouragement during the entire period of the internship and report preparation. This internship has been a truly enriching experience and a vital step in my professional development.

SIDDANAGOUDA

CHAPTER 1

INTRODUCTION

1.1 Training Objective

1. To understand the working and functions of the Cyber Crime Police Station.
2. To observe how cybercrime cases are handled.
3. To understand the classification of cybercrime complaints.
4. To learn about digital evidence collection and preservation.
5. To understand the challenges faced by cybercrime investigators.
6. To understand the importance of cyber awareness and prevention.
7. To learn the procedure for registering cybercrime complaints and FIRs.
8. To observe how the Cyber Crime Police Station coordinates with banks, Internet Service Providers (ISPs), social media platforms, and other organizations.
9. To gain knowledge about the National Cyber Crime Reporting Portal (NCRP) and the Cyber Crime Helpline (1930).
10. To understand how cybercrime complaints are received, verified, and analyzed before further investigation.

1.2 About Organization

History:

The Cyber Crime Police Station, Haveri was established by the Karnataka Police to investigate cyber-related offences and provide a dedicated platform for reporting cybercrimes. With the rapid growth of internet usage, online banking, digital payments, and social media, cyber offences such as online financial fraud, hacking, identity theft, phishing, cyberbullying, and social media misuse have increased. To address these crimes effectively, the Government of Karnataka established Cyber Crime Police Stations in various districts, including Haveri.

The Cyber Crime Police Station, Haveri, functions under the Haveri District Police and is responsible for investigating cyber offences reported within the district. The station receives complaints from victims, registers cases, collects digital evidence, conducts technical investigations, and coordinates with banks, internet service providers, social media companies, and other law enforcement agencies to trace offenders and recover losses whenever possible.

Building Infrastructure:

The **Cyber Crime Police Station, Haveri**, functions under the **Haveri District Police** and is equipped with the basic infrastructure required for investigating cybercrime cases. The police station provides a secure and professional environment for handling complaints, conducting investigations, and preserving digital evidence. The police station has a **reception and complaint registration counter** where citizens can report cybercrime complaints and seek assistance. It contains **investigation rooms** where police officers conduct enquiries, record statements, and analyze cybercrime cases.

The station is equipped with **computers, laptops, high-speed internet connectivity, printers, scanners, and secure networking facilities** to support cyber investigations. A **record room** is maintained for the safe storage of case files, digital evidence, and official documents. The police station has **CCTV surveillance systems** to enhance security and monitor activities within the premises. Officers have access to **secure communication facilities**, including telephones, official email, and online crime reporting systems for coordination with other agencies.

Basic facilities such as **officer workstations, meeting rooms, visitor seating, washrooms, and parking space** are available for the smooth functioning of the police station. The station coordinates with the **National Cyber Crime Reporting Portal (NCRP)**, **1930 Cyber Helpline**, banks, internet service providers (ISPs), and other law enforcement agencies through secure digital communication systems. The overall infrastructure is designed to support **efficient investigation of cyber offences, secure handling of digital evidence, and effective public service**.

WORK AND DUTIES OF POLICE OFFICERS:**Sentry:**

The sentry in Cybercrime Police Station is one of the police constables in the police station assigned to guard and secure the premises of the police station according to their shift. The sentry's main duty is to maintain security, discipline, and control over the entry and exit of people and materials. The sentry keeps watch at the entrance, records visitors details, and prevent unauthorized access.

- The primary responsibility of the sentry is to guard the main entrance of the police station. Every person who enters the Police station whether complainant, or visitor recorded in the visitor's register. The sentry ensures that only authorized individuals are allowed inside.
- Their duty is to monitor the entry and exit of all individuals, including officers, complainants, visitors, and accused persons. They maintain a visitor's register and allow entry only after confirming with the Duty officer.

- At night or duty off-duty hours, the sentry remains responsible for station security, ensuring that all rooms, computers, and evidence storage areas are properly locked and protected.
- Assisting the Duty officer in controlling visitor flow and maintaining order during complaint filing.
- Ensuring proper locking and safety of all rooms, equipment, and evidence storage areas after duty hours.

Each Police station has a police constable attending to the Sentry duty round the clock. The Police constable conducting sentry duty is equipped with arms and his main activity is to protect the Police station from external attack as well as to protect the government property held in the Police station from loss/misuse.

Station House Officer:

The Station House Officer is the head in charge of the police station. In the Cyber Crime Police Station of Haveri. The DSP Rank officer is the Station house officer. The SHO holds the overall responsibility for supervising all investigations, administrative work, and staff discipline. The SHO ensures that the station functions efficiently and that all cases are handled according to the law and departmental procedures.

The SHO oversees the registration, monitoring and investigation of all cases reported to the station. They assign cases to investigating officers, review progress reports, and ensure that every case is investigated promptly and fairly

SHO Duties:

- Supervises all administrative and investigative work of the Police Station.
- Ensures proper registration and verification of all cybercrime complaints.
- Guides investigating officers in handling digital evidence technical procedures.
- Monitors investigation progress and reviews case files regularly.
- Coordinates with cyber forensic experts, service providers, and banks to trace online frauds, IP addresses, and digital trails.

- Approves FIRs, reports, and charge sheets before forwarding them to higher authorities or court.
- Ensures legal compliance with the Information Technology Act, 2000 and related sections of the Bhartiya Nyaya Sanhita.
- Maintains staff discipline and assign duties among officers and constables.
- Conducts daily briefing and guides subordinates in effective investigation practices.
- Organizes public awareness programs on cyber safety and online fraud prevention.
- Represents the station in official meetings, coordination with district police, and public outreach activities.
- Ensures confidentiality and integrity of digital evidence and case materials.
- Promotes teamwork and efficiency within the station to handle cases promptly and professionally

There are different processes to be executed relating to Law and order, Crimes, Petitions such as issue of notices, issue of summons and execution of warrants which are done by the Process staff.

A few police constables are allotted for Court duty. Apart from attending to Court regularly, they also do many coordination activities between Court and police station. The Court staff takes witnesses, complainants, accused, etc. to the public prosecutor. They also note down the progress of each case on a daily basis and produce the investigation report, if asked to.

Police Sub Inspector:

The major duty of a Police Sub-Inspector (PSI) in a police station is to investigate offences committed through digital means, such as online fraud, cyber harassment. The PSI ensures proper registration of complaints and FIRs, collects and preserves digital evidence. They also guide victims on legal procedures, and report investigation progress to senior officers. Essentially, the PSI acts as the backbone of the investigation process, ensuring that crime cases are properly handled from registration to prosecution.

Duties of PSI:

- Investigate cyber offences like online fraud, and social media crimes.
- Register complaints and record FIRs related to cybercrime.
- Collect, preserve, and document digital evidence correctly.
- Guide victims regarding legal procedures and evidence submission.
- Submit regular investigation reports to senior officers (SHO).
- Monitor trends in cybercrime and take preventive measures.
- Prepare case files and present evidence in court proceeding.

Head Constable:

A head constable serves as a senior non-gazetted officer in the police hierarchy, assisting higher officers in maintaining law and order. In a general police station, their duties include supervising constables, assisting in investigations, managing records, and ensuring security at police premises. In a cybercrime police station, a Head Constable assists in registering complaints, helps collect and preserve digital evidence, monitors cyber activities under guidance, and supports the PSI or other investigating officers in handling cases.

Duties of HC:

- Supervises and guide constables in daily duties.
- Assist in maintaining law and order.
- Helps in registering complaints and recording FIRs.
- Assist in investigations and collection of evidence, including digital evidence in cybercrime cases.
- Maintain records, case files, and station logs.
- Ensure security of police premises and sensitive areas.
- Coordinate with public and other police units as required.

- Supports officers in court proceedings and presentation of evidence.
- Enforce discipline and administrative tasks within the police station

1.3 Internship Details

The internship was carried out at the **Cyber Crime Police Station (CCPS), Haveri**, under the **Superintendent of Police Office, Haveri District, Karnataka**. The primary objective of the internship was to gain practical exposure to cybercrime investigation procedures, digital evidence handling, and the functioning of law enforcement agencies in addressing cyber offences.

The internship was conducted for a period of **one month**, from **13 May 2026 to 11 June 2026**. During this period, I was given an opportunity to observe the day-to-day functioning of the Cyber Crime Police Station and understand the investigation process of various cybercrime cases. I also learned about the use of cyber investigation platforms such as the **National Cyber Crime Reporting Portal (NCRP)**, **Cyber Police Portal**, **Samanvaya**, and **Sahayoga**.

The internship was undertaken as a part of the **Bachelor of Technology (B.Tech.) in Cyber Security and Cyber Forensics** curriculum under the **Department of Cyber Security and Cyber Forensics, parul Institute of Engineering and Technology (PIET), P.O. Limda, Ta. Waghodia, Vadodara – 391760, Gujarat**.

The internship was carried out under the guidance of the officers of the **Cyber Crime Police Station, Haveri**, headed by **Smt. Yashoda Vantagodi, Deputy Superintendent of Police (DSP)**, along with the support of other police officers and staff. At the university level, the internship was guided by the assigned faculty mentor from the **Department of Cyber Security**.

CHAPTER 2

NATURE OF WORK DONE

2.1 Technologies / Methodologies Used

NATIONAL CYBER CRIME REPORTING PORTAL

Fig.2.1.1 NCRP

The National Cyber Crime Reporting Portal is an online platform launched by the Government of India to enable citizens to report cybercrimes in a convenient and transparent manner. The portal was developed by the Ministry of Home Affairs (MHA) under the Indian Cyber Crime Coordination Centre (I4C) initiative. It aims to strengthen the mechanism for preventing, detecting, and investigating cyber offences across the country.

The portal can be accessed at www.cybercrime.gov.in and operates 24*7, allowing any citizen to file a complaint related to cybercrime from anywhere in India. It serves as a bridge between the public and law enforcement agencies, ensuring faster registration and redressal of cyber-related complaints.

Objectives:

- To provide a centralized and user-friendly platform for reporting all types of cyber crimes.
- To improve coordination between state and central law enforcement agencies.
- To ensure quick response and investigation of cybercrime complaints.
- To promote awareness about safe online practices among citizens.

Types of Complaints Reported:

1) Cyber crime against Women and Children:

- Cyberstalking, cyberbullying, sharing of obscene content, etc

2) Financial and online fraud cases:

- UPI scams, credit/debit card frauds, online banking frauds, and phishing.

3) Other Cyber offences:

- Hacking, identity theft, ransomware attacks, and data theft.

Key features:

- Citizens can file complaints anytime and from anywhere.
- Victims can upload evidence such as screenshots, chat logs, or transaction details.
- Complaints are forwarded to the concerned State/UT police for further investigation.
- The portal offers a cyber helpline number 1930, for immediate assistance in cases like financial fraud.
- Provides guidelines, FAQs, and awareness materials for cyber safety.

Purpose and Importance:

The main purpose of the portal is to simplify the process of reporting cyber crimes and to ensure that victims receive timely help and justice. It also helps law enforcement agencies in data collection, analysis, and coordination to combat the growing challenges of cybercrime.

Samanvaya

Fig. 2.1.2 SAMANVAYA PORTAL

Samanvaya is a **Joint Cyber Crime Investigation Facilitation Platform** developed by the **Indian Cyber Crime Coordination Centre (I4C)** under the Ministry of Home Affairs, Government of India. It is used by law enforcement agencies to support cyber crime investigations and improve coordination among different departments.

Key Features of Samanvaya:

- Helps in the prevention, analysis, and investigation of cyber crimes.
- Assists in blocking fraudulent SIM cards, devices, and applications.
- Helps identify mule bank accounts used in financial frauds.
- Provides telecom linkage analysis for tracing suspects.
- Supports banking and financial transaction analysis.
- Facilitates information sharing among police agencies across India.
- Provides techno-legal support during investigations.
- Assists in obtaining bank details and CCTV footage when required.
- Helps investigators connect related cyber crime cases.
- Improves the speed and efficiency of cyber crime investigations.

During my internship at the Cyber Crime Police Station, Haveri, I learned how Samanvaya is

collecting and examining digital evidence. It is an important platform that strengthens cyber crime investigation and coordination at the national level.

Cyber Police Portal

Fig. 2.1.3 CYBER POLICE PORTAL

During my internship at the Cyber Crime Police Station (CCPS), Haveri, I was introduced to the **Cyber Police Portal**, which is an important platform used by law enforcement agencies for managing and investigating cyber crime cases. The portal is maintained under the **Indian Cyber Crime Coordination Centre (I4C)** and helps police officers handle cyber crime complaints efficiently.

The Cyber Police Portal provides a centralized system for complaint management, case monitoring, and coordination among various agencies involved in cyber crime investigations. It helps investigators access case details, track the progress of investigations, and communicate with relevant stakeholders. The portal plays a significant role in ensuring timely action against cyber criminals and improving the effectiveness of cyber crime investigations.

Key Features of the Cyber Police Portal:

- Used by authorized police officials for cyber crime investigation.
- Provides a centralized platform for managing cyber crime cases.
- Helps in monitoring and tracking complaints received through NCRP.
- Facilitates coordination between police departments and other agencies.

- Supports investigation of online financial frauds and cyber offenses.
- Enables secure access to cyber crime case information.
- Assists in maintaining digital records of complaints and investigations.
- Helps investigators gather and analyze relevant information.
- Improves the speed and efficiency of cyber crime case management.
- Supports effective communication among stakeholders involved in investigations.

Through the internship, I learned how the Cyber Police Portal is used in real-time investigations and how it assists officers in handling cyber crime complaints systematically. The portal is an essential tool for modern cyber policing and contributes significantly to the prevention and investigation of cyber crimes in India.

SAHAYOGA

Purpose, Objectives and Core Principles

- Ensures investigators can obtain required information through standardized and legally compliant procedures.
- Minimizes administrative bottlenecks associated with traditional communication methods and manual workflows.
- Supports accountability through secure request management and comprehensive audit capabilities.
- Facilitates cooperation between government agencies and private digital ecosystem stakeholders.
- Provides structured information-sharing channels improving investigation efficiency and effectiveness.
- Promotes transparency by maintaining records of requests, responses, and operational actions.

- Enhances cybercrime response capabilities through timely access to critical investigative information.
- Strengthens lawful evidence acquisition while maintaining privacy and compliance requirements.

Dashboard Modules and Navigation Structure

- Request Management Module enables creation, submission, monitoring, and management of information requests.
- Dashboards display pending requests, completed responses, escalation requirements, and processing timelines.
- Investigation officers can track status updates without repeated external communication efforts.
- Search functionality retrieves requests using case references, identifiers, or agency information.
- Communication modules facilitate secure interactions between investigators and responding organizations.
- Administrative dashboards provide visibility into workloads, response times, and operational performance.
- Documentation management sections securely store legal authorizations and supporting records.
- Reporting modules generate statistics regarding request volumes and cooperation effectiveness.

Unique Features and Advanced Capabilities

- Provides centralized communication channels replacing fragmented email-based information request processes.
- Standardized workflows ensure requests follow predefined legal and operational requirements consistently.
- Digital audit trails record every action throughout request and response lifecycles.

- Real-time monitoring reduces uncertainty regarding information acquisition and processing activities.
- Centralized records allow future reference and historical investigation support.
- Supports collaboration among agencies involved in complex multi-jurisdictional cybercrime investigations.
- Secure communication mechanisms reduce risks of unauthorized disclosure of sensitive information.
- Structured responses improve consistency and quality of information received from organizations.

Prerequisite Inputs Required

- Authorized law enforcement credentials and approved access permissions are mandatory.
- Investigation details including case references and complaint numbers must accompany requests.
- Supporting legal authorizations validate requests and ensure compliance requirements are met.
- Specific identifiers such as emails, mobile numbers, usernames, or account details are required.
- Investigative objectives must be clearly defined within submitted requests.
- Applicable legal provisions supporting disclosure should be documented appropriately.
- Supporting evidence and investigation records strengthen information request validity.
- Accurate and complete submissions improve response efficiency and operational effectiveness.

Outputs Generated

- Generates unique request records enabling tracking throughout processing lifecycles.
- Provides investigators with legally shared information from participating organizations.

- Status updates indicate acceptance, processing, completion, rejection, or escalation stages.
- Supervisory authorities receive performance reports regarding operational efficiency metrics.
- Audit records maintain complete histories of communications and actions performed.
- Response documentation supports investigation activities and evidence management requirements.
- Analytical reports help evaluate stakeholder cooperation effectiveness over time.
- Historical records assist future investigations requiring reference to previous requests.

Limitations and Challenges

- Platform effectiveness depends heavily on timely cooperation from external service providers.
- Differences in organizational policies may affect consistency and response timelines.
- Incomplete or inaccurate requests can delay information retrieval processes significantly.
- Investigators require adequate training to prepare legally compliant requests.
- Large request volumes may create administrative and operational workload pressures.
- Strict privacy regulations require careful handling of sensitive information.
- Response delays from external organizations can affect investigation progress.
- Complex legal requirements may increase procedural challenges during urgent cases.

Recommended Solutions

- Conduct regular training programs covering platform usage and legal compliance requirements.
- Establish standardized templates improving request completeness and processing consistency.

- Enhance automation capabilities supporting categorization, prioritization, and monitoring activities.
- Strengthen service-level agreements encouraging timely responses from organizations.
- Implement periodic audits evaluating operational performance and security compliance.
- Improve integration mechanisms reducing communication delays and administrative burdens.
- Develop advanced tracking tools increasing visibility into request lifecycles.
- Promote stakeholder collaboration through continuous engagement and operational reviews.

Conclusion

- SAHAYOGA plays a crucial role in supporting cybercrime investigations through structured cooperation mechanisms.
- Centralized communication channels improve efficiency and reduce delays in information acquisition.
- Secure workflows strengthen accountability, transparency, and compliance during investigations.
- Audit trails and monitoring features enhance operational oversight and governance.
- Effective cooperation with digital service providers significantly improves investigation outcomes.
- Continuous improvements in training, automation, and coordination can increase effectiveness.
- Platform remains an essential component of India's cybercrime investigation ecosystem.
- Important Viva: SAMANVAYA focuses on intelligence sharing and analytics, whereas SAHAYOGA focuses on information requests and investigation cooperation.

FIR:

A First Information Report (FIR) is an official document prepared by the police when they receive information regarding the commission of a cognizable offence. It serves as the initial step in the criminal investigation process and provides the legal basis for police action. The FIR holds great evidentiary value, as it sets the criminal law in motion and ensures that an offence is formally recorded and investigated.

The FIR is generally lodged by the victim, a witness, or any person having knowledge of the incident. It contains vital details such as the date, time, and place of occurrence, the nature of the offence, the identity of the accused (if known), and a brief account of the incident. The report is recorded either orally or in writing at the police station, after which it is read over to the informant to confirm accuracy before obtaining their signature or thumb impression.

Once registered, the FIR is assigned a unique registration number and entered into the Police IT system, which ensures digital record maintenance and easy tracking of the case. A free copy of the FIR is provided to the complainant as per Section 173 of the **Bharatiya Nagarik Suraksha Sanhita (BNSS), 2023**.

After the registration of an FIR, the Investigating Officer (IO) initiates further proceedings, including evidence collection, scene inspection, recording of witness statements, and arrest of the accused if necessary. The progress of the investigation is periodically updates in the Police IT portal to maintain transparency and accountability.

In modern times, FIRs can also be registered online through digital platforms such as Police IT portal and the National Cyber Crime Reporting Portal. This technological advancement has made the process more accessible, transparent, and citizen-friendly, contributing to greater efficiency in the criminal justice system.

Final Report:

The Final Report of investigation is the concluding document prepared by the Investigating Officer after completion of the investigation in a criminal case and is submitted to the jurisdictional Magistrate under section 193 (3) of the Bhartiya Nagarika Suraksha Sanhita. This report presents the outcome of the investigation along with details such as the crime number, sections of law, particulars of the complainant and accused, brief facts of the case, witnesses examined, documents and material objects collected, and forensic or expert reports. Based on

the findings, the final report may be filed as a chargesheet when sufficient evidence exists or as a closure report when evidence is insufficient or the case is found to be false, mistaken, civil in nature, or undetected. Upon receiving the report, the court may accept it, take cognizance of the offence, or order further investigation.

Report A:

A type report is submitted when the complaint is found to be true, and the offence has actually occurred, but the identity of the accused cannot be traced despite sincere and thorough investigation. In such cases, all possible investigative steps are taken, including examination of witnesses and technical analysis, but no sufficient clue is obtained to identify the offender. The report is submitted to the court requesting permission to close the case as undetected, with the provision that the case may be reopened if new evidences emerges in the future.

Report B:

B type report is filed when the investigation clearly establishes that the complaint is false, fabricated and no offence has been committed. In such cases, evidence collected during the investigation disproves the allegations made by the complainant. The court may accept the B report and close the case, and in appropriate cases, legal action may be initiated against the complainant for filing a false complaint.

Report C:

C type of report is submitted when the facts of the complaint are true, but the despite is found to be purely civil in nature and does not constitute a criminal offence. Such cases usually involve issues like monetary disputes, property matters, or contractual disagreements.

General Procedure for Cybercrime Investigation:

The general procedure followed for the investigation of cybercrime cases was observed to be systematic and technology-oriented. Cybercrime investigation involves a combination of legal procedures, technical analysis, and forensic examination to identify offenders and collect admissible digital evidence.

1. Receipt of Complaint

Cybercrime complaints are received through various modes such as the National Cybercrime

Reporting Portal, 1930 Cybercrime Helpline, or by direct written complaints at the police station. Upon receipt, the complaint details are recorded and acknowledged.

2. Preliminary Assessment

The investigation officer conducts a preliminary examination to understand the nature of the Offence, type of cybercrime involved, and jurisdictional aspects. In cases of financial fraud, immediate steps are taken to prevent further loss by freezing suspicious accounts.

3. Registration of FIR

If a cognizable offence is made out, an FIR is registered under provisions of the Information Technology Act, 2000 along with applicable sections of the Bharatiya Nyaya Sanhita. A copy of the FIR is provided to the complainant.

4. Preservation and Collection of Digital Evidence

Digital evidence such as mobile phones, computers, transaction details, emails, messages, screenshots, IP addresses is collected. Proper procedures are followed to ensure preservation of evidence and maintenance of chain of custody, which is crucial for court proceedings.

5. Technical Analysis

The collected digital data is analyzed to trace the source of the crime. This includes examination of IP addresses, email headers, transaction trails, call detail records, and server logs. Specialized cyber tools and software are used for analysis.

6. Coordination with Service Providers

The police coordinate with various service providers such as banks, telecom companies, Internet service providers, social media platforms, payment gateways. Official notices are issued to obtain subscriber details, transaction records, and account activity logs.

7. Forensic Examination

Seized electronic devices are forwarded to the Forensic Science Laboratory (FSL) for detailed Forensic examination. The forensic analysis may include data recovery, deletion analysis, malware detection, and timeline reconstruction.

8. Identification and Tracing of the Accused

Based on technical evidence and forensic findings, the accused is identified and traced.

Supporting evidences such as bank account details, SIM registration information, and CCTV footage (if available) is collected.

9. Arrest and Further Legal Action

If sufficient evidence is available, the accused is arrested following legal procedures. Devices And materials used in the commission of the offence are seized, and interrogation is conducted to uncover further details or accomplices.

10. Filing of Charge sheet

After completion of the investigation, a charge sheet is prepared, incorporating digital evidence,

forensic reports, and witness statements. The charge sheet is submitted before the competent court within the prescribed time limit.

11. Trial and Prosecution Support

The investigating officer assists the prosecution during the trial by presenting digital evidence And explaining technical aspects. Expert testimony may be provided when required.

2.2 Description of Tasks Assigned

During my internship at the Cyber Crime Police Station (CCPS), HAVERI, I was assigned to observe and understand various activities carried out by the police officers during cybercrime investigations. The tasks assigned to me mainly focused on learning the practical aspects of cybercrime complaint handling, digital evidence management, and investigation procedures. The following activities were observed during the internship:

1. Complaint Registration

- Observed how cybercrime complaints are received through the National Cyber Crime Reporting Portal (NCRP), Cyber Helpline (1930), and direct written complaints.

- Learned the procedure for verifying complaint details and recording them in the police system.
- Understood the process of categorizing complaints based on the nature of the cyber offence.

2. FIR Observation

- Studied the procedure for registering a First Information Report (FIR) for cognizable cyber offences.
- Observed the information included in an FIR, such as complainant details, nature of offence, date, time, and place of occurrence.
- Learned about the legal importance of FIR registration and the subsequent investigation process.

3. Digital Evidence Collection

- Observed the collection and preservation of digital evidence such as mobile phones, computers, screenshots, emails, transaction records, IP addresses, and chat records.
- Learned the importance of maintaining the chain of custody while handling electronic evidence.
- Understood the role of forensic laboratories in examining seized digital devices.

4. Digital Investigation

- Learned the general procedure followed in cybercrime investigations.
- Observed how investigators trace suspects using IP addresses, Call Detail Records (CDRs), bank transaction trails, CCTV footage, and social media information.
- Understood how technical analysis and forensic examination support criminal investigations.

5. Portal Usage

- Gained practical knowledge of the National Cyber Crime Reporting Portal (NCRP), Cyber Police Portal, Samanvaya, and Sahayoga platforms.

- Learned how these portals assist police officers in complaint management, investigation, information sharing, and coordination with banks, telecom companies, and other agencies.
- Observed the use of these digital platforms for efficient cybercrime case management.

6. Investigation Process

- Observed the complete cybercrime investigation workflow, including complaint receipt, preliminary assessment, FIR registration, evidence collection, technical analysis, coordination with service providers, forensic examination, identification of accused, arrest procedures, and submission of the charge sheet.
- Understood how legal procedures and technical investigations work together during cybercrime investigations.

7. Case Documentation

- Observed the preparation and maintenance of investigation records, case files, FIRs, panchanamas, witness statements, forensic reports, and final reports.
- Learned the importance of accurate documentation for legal proceedings and court presentation.
- Understood how proper documentation ensures transparency, accountability, and effective prosecution of cybercrime cases.

Fig 3.2.3-Final certificate taken at Cyber Crime Police Station, Haveri

CHAPTER 4

LEARNING OUTCOMES

4.1 Projects Undertaken

CASE STUDY

Investigative measures to be taken in Facebook cases

1) Registration of the case:

- When a complaint is received regarding the misuse of Facebook, such as the posting of provocative, obscene, defamatory, or illegal content, or the creation and use of fake accounts, the Cyber Crime Police Station registers a case under the relevant provisions of the Information Technology Act and the Bhartiya Nyaya Sanhita.

2) Preservation of Digital Evidence:

- There is a possibility that the accused may delete the disputed content or deactivate the Facebook account to destroy evidence. Therefore, at the time of receiving the complaint, screenshots showing the username and URL of the accused's Facebook account and URL of the disputed message, image, or video are obtained from the complainant and incorporated into the case records.

3) Conduct of Panchanama and Online Verification

- After registration of the case, the investigating officer, with the assistance of experts, open the Facebook account of the complainant to the internet. The Facebook account of the accused is searched, opened, and verified.
- Details such as the URL of the accused's Facebook account, profile photograph, identifying information, brief description of the disputed content, date and time of upload, and URL of the disputed message are clearly entered in the Panchanama

4) Collection of Screenshots and Electronic Records:

- During the Panchanama, screenshots of the accused's Facebook username, profile photograph, identifying details, and disputed content are taken in such a manner that the URL is clearly visible. These screenshots are saved with appropriate file names, stored on a CD, and incorporated into the case.
- If the accused has deleted the disputed message, the same is clearly mentioned in the Panchanama, and Section 238 of Bhartiya Nyaya Sanhita is applied for destruction of evidence.

5) Certification under Section 63 of Bhartiya Sakshya Adhiniyam

- Printouts of the screenshots taken during the Panchanama are signed by the Panchas, complaint or witness, and the investigating officer and included in the case file. A certificate under Section 63 of Bhartiya Sakshya Adhiniyam is obtained from the computer operator or concerned staff who handled the electronic evidence and adopted in the case.
- Photographs taken during the Panchanama are preserved on a CD along with a Section 63 certificate and a print copy.

6) Examination of Witnesses

- Statements of relatives, friends, and other persons who have seen the disputed message, image, or video posted by the accused on Facebook are recorded and treated as witness statements. If any person from the Facebook friends list is known, their statement is recorded to establish the identity of the accused and the posting of the disputed content.

7) Collection of Information from Facebook and Service Providers

- A request is sent through proper channels to the Honorable Superintendent of Police, Cyber Crime Division, CID Bangalore, requesting Facebook to provide details related to the case. These include registration details of the accused's Facebook account, mobile number, email ID, IP address used at the time of account creation, IP address related to the disputed content, and login IP details for a required period.

8) IPAdress and CDR Analysis

- After receiving IP address information from Facebook, IP tracing is carried out and requests are sent to the concerned service providers through the CDR department to obtain Call Detail Records (CDR), and Customer Application Forms. Certificates under Section 63 of the

Bhartiya Sakshya Adhiniyam are obtained from the service providers and incorporated into the case.

9) Identification and Legal Action Against the Accused

- Based on the technical evidence and witness statements, the identity of the accused is established. If the offence is punishable with imprisonment of less than seven years, the guidelines issued by the Honorable Supreme Court in Arnesh Kumar vs State of Bihar are followed.
- A notice under Section 35(3) of BNSS is issued to the accused to appear before the investigating officer. If the accused cooperates, photo identity proof, address proof, and a self-declaration are collected.

10) Seizure and Examination of Mobile Phone

- The accused produces the mobile phone and SIM card used for committing the offence, which are seized under a detailed Panchanama in the presence of witnesses. If the mobile phone is protected by a password or pattern lock, the method of unlocking is obtained and recorded.
- Screenshots of the disputed content available on the mobile phone are taken, saved, printed, supported with a section 63 certificate, and incorporated into the case.

11) Forensic Examination

- The seized mobile phone and SIM card are entered in the police station property register. With permission of the Honorable Court, the mobile phone is sent to the Forensic Science Laboratory (FSL) for expert examination through proper channels. The request letter clearly mentions the unlocking method if applicable.
- Specific questions are addressed to the FSL expert regarding the presence of the Facebook application, creation and posting of the content, SIM card details, and time of posting.

12) Tracing Absconding Accused

- If the accused absconds, technical methods such as CDR analysis of mobile numbers and IMEI numbers, SDR and customer application form verification, bank SMS analysis, ATM withdrawal data analysis, mobile recharge details, Aadhaar-linked mobile numbers, online shopping SMS verification, and email login IP analysis are adopted to locate the accused.

13) Completion of Investigation

- After completion of the investigation, a draft charge sheet is prepared and submitted to the Assistant Government Prosecutor for review. If government sanction is required, establishment report is forwarded to the concerned authority. After receiving approval, the final report is submitted before the Honorable court.

4.2 Technical Skills Gained

During my internship at the Cyber Crime Police Station, Haveri. I observed the functioning, management, and technical processes involved in the investigation of cybercrimes. The station plays an essential role in tackling offences committed through computers, mobile devices, and online platforms.

The police station receives numerous complaints related to online financial frauds, social media impersonation, identity theft, and hacking. Many of these cases involve the creation of fake social media accounts on platforms such as Facebook and Instagram, which are classified as cases of impersonation or identity theft under Sections 66C and 66D of the Information Technology Act, 2000.

Complaints are received either directly from victims or through the National Cyber Crime Reporting Portal (NCCRP). This platform allows citizens to report cyber offences directly, which are then assigned to the respective state or district cybercrime police station for investigation. During the internship, I learned how officers verify online complaints, collect digital evidence, and trace suspects using IP address tracking, call detail records, and social media data analysis.

Interaction with Staff and Public approach:

One of the most remarkable aspects observed during the internship was the positive attitude and professionalism of the police personnel. The staff at the Cyber Crime Police Station, Haveri. were very cooperative, polite, and helpful towards the people who approached the police station to file complaints. Officers patiently listened to each complainant's issue,

provided clear guidance on the steps to be followed, and explained the procedures for filing cybercrime complaints through the National Cyber Crime Reporting Portal (NCCRP).

Their respectful and empathetic behavior created a trustworthy and approachable environment, which encouraged citizens to come forward and report offences without hesitation. The staff made sure to treat victims – especially those affected by sensitive cases like financial fraud – with care, understanding, and confidentiality. This demonstrated the humanitarian side of policing, reflecting professionalism and good public ethics.

Use of the Digital Portal:

The NCCRP (National Cyber Crime Reporting Portal):

- Enables citizens to report cybercrimes online from anywhere in India.
- Complaints were forwarded to the concerned police station based on jurisdiction.
- Officers at Haveri Cyber Crime Police Station use this portal to receive, verify, and assign complaints for investigation.
- The system ensures transparency, accountability, and accessibility for the public.

Another major digital system observed during the internship was Samanvaya Portal, a comprehensive platform used by the police department for inter-departmental coordination and case management.

Samanvaya portal

The Samanvaya Portal acts as a communication bridge between different police units and higher headquarters. It helps ensure that every cybercrime case progresses smoothly and transparently through various investigation stages. Officers at the Cyber Crime Police Station, Haveri. Use the Samanvaya Portal for multiple purposes, including:

- Communication between Police Units: The Samanvaya system allows officers to share updates, instructions, and data with other police stations, district headquarters, and specialized cyber units, ensuring better coordination and faster case resolution.

Through the use of the Samanvaya Portal the Cyber Crime Police Station achieves greater efficiency, transparency, and accountability in cybercrime investigations. It has modernized

administrative processes and minimized manual errors. The system also helps maintain confidentiality, as all digital records are secured through authorized login access.

Teamwork and Inter-Agency Cooperation:

- Cyber investigations often require coordination between multiple agencies such as:
 - Other police stations and cyber units.
 - FSLs, telecom companies.
 - Banks and payment gateways in financial fraud cases.
- This teamwork demonstrates how effective communication and cooperation are essential for solving cyber offences accurately.

Awareness and Preventive Measures:

- The police station conducts cyber awareness programs in colleges and public institutions.
- These programs focus on:
 - Safe use of the internet and social media.
 - Identifying phishing emails, scams, and fake websites.
 - Reporting suspicious activities promptly through NCCRP.
- Officers encourage citizens to use strong passwords, privacy settings, and two-factor authentication to protect online accounts.
- The emphasis on awareness shows the proactive side of policing- preventing crimes before they occur.

Knowledge of Cyber Laws:

- Practical exposure to the Information Technology Act, 2000 and relevant Bharatiya Nyaya Sanhita sections was gained.
- Observed how specific sections are applied in real cases:
 - Section 66C and 66D IT Act- Identity theft and cheating by impersonation.
 - Section 67 IT Act- Publication or transmission of obscene material.

- Learned the importance of combining technical evidence with legal documentation to build a strong case for prosecution.

Professional Ethics and Conduct:

- Officers were observed maintaining confidentiality, neutrality, and discipline while dealing with sensitive data.
- Their calm and respectful approach during complaint interactions reinforced the role of ethics and professionalism in law enforcement.
- Understood that integrity, patience, and communication are essential qualities in handling cyber offences effectively.

Skills and Knowledge Gained:

- Technical learning: Exposure to NCCRP, Samanvaya, and Police IT Systems.
- Investigative learning: Understanding of digital trail analysis, evidence handling, and report preparation.
- Analytical Skills: Ability to interpret data and identify patterns in online activities.
- Legal Knowledge: Understanding of cyber laws and procedural guidelines.
- Ethical awareness: Developed sensitivity toward data privacy, victim support, and responsible cyber practices.

4.3 Soft Skills Learned

During my internship at the Cyber Crime Police Station, Haveri, I developed several soft skills that are essential for working in a professional law enforcement environment. These skills enhanced my ability to interact effectively with officers, victims, and the public while understanding the importance of discipline, ethics, and teamwork. The major soft skills gained during the internship are as follows:

1. Communication Skills

- Improved verbal and interpersonal communication by interacting with police officers and staff.

- Learned to communicate clearly and professionally while discussing cybercrime cases and investigation procedures.
- Developed the ability to listen carefully and understand the concerns of complainants before recording information.

2. Teamwork

- Observed how officers work together to investigate cybercrime cases efficiently.
- Understood the importance of coordination among police personnel, banks, telecom service providers, forensic laboratories, and other government agencies.
- Learned that effective teamwork is essential for solving complex cybercrime cases within the required time.

3. Professional Ethics

- Learned the importance of maintaining confidentiality while handling sensitive digital evidence and victim information.
- Observed police officers performing their duties with honesty, discipline, fairness, and responsibility.
- Understood the ethical standards required in cybercrime investigation and law enforcement.

4. Public Interaction

- Observed how officers treated complainants with patience, respect, empathy, and professionalism.
- Learned the importance of guiding victims regarding complaint registration, cyber safety, and legal procedures.
- Developed an understanding of maintaining a positive and citizen-friendly approach while interacting with the public.

5. Time Management

- Learned the importance of completing investigation-related tasks within prescribed timelines.

- Observed how officers efficiently managed multiple cybercrime complaints while maintaining accurate records and documentation.
- Developed the ability to prioritize tasks and work systematically in a professional environment to ensure timely case handling.

4.4 Industry Practices Observed

During my internship at the Cyber Crime Police Station, Haveri, I observed several professional practices followed by law enforcement agencies in handling cybercrime investigations. These practices provided valuable practical exposure to modern policing techniques and the standard procedures adopted in cybercrime investigation.

1. Police Procedures

- Observed the standard procedure followed from the receipt of a cybercrime complaint to the completion of the investigation.
- Learned how complaints are verified, registered, and assigned to investigating officers.
- Understood the importance of following legal procedures while handling cybercrime cases and maintaining official records.

2. Investigation Workflow

- Studied the complete workflow of a cybercrime investigation, including complaint registration, preliminary assessment, FIR registration, digital evidence collection, technical analysis, forensic examination, identification of suspects, arrest, and submission of the charge sheet.
- Observed how investigators use technical and legal methods together to solve cybercrime cases efficiently.

3. Coordination with Banks

- Learned that investigating officers coordinate with banks and payment gateways to trace fraudulent financial transactions.
- Observed the process of requesting account details, transaction records, and freezing suspicious bank accounts in cases of online financial fraud.

- Understood the importance of timely coordination with banking institutions to prevent further financial loss to victims.

4. Coordination with Forensic Science Laboratory (FSL)

- Observed that seized electronic devices such as mobile phones, computers, and storage media are forwarded to the Forensic Science Laboratory (FSL) for detailed forensic examination.
- Learned how forensic experts recover deleted data, analyze digital evidence, detect malware, and prepare forensic reports to support criminal investigations.
- Understood the significance of forensic reports in court proceedings and criminal prosecution.

5. Coordination with Telecom Companies

- Learned how police officers coordinate with telecom service providers to obtain Call Detail Records (CDRs), subscriber information, IP address details, SIM registration records, and location-related information.
- Observed that this information is used to trace suspects and establish digital evidence during investigations.
- Understood the role of telecom companies in supporting cybercrime investigations through lawful information sharing.

6. Legal Documentation

- Observed the preparation and maintenance of important legal documents such as FIRs, panchanamas, witness statements, seizure reports, Section 63 certificates, forensic reports, charge sheets, and final investigation reports.
- Learned the importance of accurate documentation to ensure transparency, accountability, and successful prosecution of cybercrime cases.
- Understood that proper legal documentation is essential for presenting reliable evidence before the court.

4.5 Professional Experience Overview

The internship at the Cyber Crime Police Station (CCPS), Haveri provided me with valuable practical exposure to the functioning of a specialized cybercrime investigation unit. Throughout the internship, I observed how cybercrime complaints are received, verified, investigated, and documented using modern investigation techniques and digital platforms. This experience helped me understand the practical application of cyber security concepts learned during my academic studies.

I had the opportunity to interact with experienced police officers, who guided me through various investigation procedures, complaint handling methods, digital evidence collection, and the use of cybercrime investigation portals. Their professionalism, discipline, and willingness to share knowledge greatly enhanced my learning experience.

The staff members were cooperative, approachable, and respectful while dealing with complainants. I observed that every complaint was handled patiently, and victims were provided with proper guidance regarding legal procedures and cyber safety. This positive public-oriented approach demonstrated the importance of professionalism, empathy, and ethical conduct in law enforcement.

Overall, the internship strengthened my technical knowledge, communication skills, teamwork, analytical thinking, and understanding of cybercrime investigation. It also increased my confidence and motivated me to pursue a career in the field of cyber security and digital forensics.

5.2 Challenges Faced and How I Overcame Them

During my internship at the Cyber Crime Police Station (CCPS), Haveri, I encountered several challenges while learning the practical aspects of cybercrime investigation. With the guidance and support of the police officers, I was able to overcome these challenges and improve my understanding of cybercrime investigation procedures.

1. Challenge in Understanding Investigation Procedures

Initially, I found it difficult to understand the complete workflow of cybercrime investigations because every case follows a systematic legal and technical process. By carefully observing the investigation process, interacting with investigating officers, and studying real case procedures, I gradually understood the sequence of complaint registration, FIR preparation, evidence collection, forensic examination, and charge sheet submission.

2. Learning New Cyber Investigation Portals

At the beginning of the internship, I had no practical knowledge of platforms such as the National Cyber Crime Reporting Portal (NCRP), Cyber Police Portal, Samanvaya, and Sahayoga. Through demonstrations provided by the officers and regular observation of their usage, I learned the purpose and functioning of these portals and understood how they assist in cybercrime complaint management and investigation.

3. Understanding Legal Procedures

Another challenge was understanding the legal provisions related to cybercrime cases, including the Information Technology Act, 2000, the Bharatiya Nyaya Sanhita (BNS), 2023, and the Bharatiya Nagarik Suraksha Sanhita (BNSS), 2023. By discussing case examples with police officers and observing how different legal sections were applied in actual investigations, I gained a better understanding of the legal framework governing cybercrime investigations.

4. Handling Digital Evidence

Initially, I had limited knowledge of digital evidence collection and preservation. During the internship, I learned the importance of collecting electronic evidence such as mobile phones, computers, screenshots, emails, IP addresses, and transaction records while maintaining the chain of custody. Observing the procedures followed by investigators and forensic experts

helped me understand the significance of proper evidence handling in ensuring successful prosecution.

How I Overcame These Challenges

I overcame these challenges by actively observing daily investigation activities, asking questions to experienced police officers, studying cybercrime investigation procedures, and learning through practical demonstrations. Continuous interaction with the staff and exposure to real cybercrime cases improved my technical knowledge, analytical skills, confidence, and understanding of modern cybercrime investigation practices.

CHAPTER 6

CONCLUSION

6.1 Summary of Experience

The internship at the **Cyber Crime Police Station (CCPS), Haveri** was a highly informative and enriching experience that provided me with practical exposure to the functioning of a cybercrime investigation unit. During the internship, I observed how cybercrime complaints are received, verified, investigated, and documented using modern investigation techniques and digital tools. I also gained knowledge of cyber investigation platforms such as the **National Cyber Crime Reporting Portal (NCRP)**, **Cyber Police Portal**, **Samanvaya**, and **Sahayoga**. The internship enhanced my understanding of cyber laws, digital evidence handling, forensic examination, and the investigation procedures followed by law enforcement agencies. It successfully bridged the gap between theoretical knowledge and practical application, making me more confident in the field of Cyber Security and Cyber Forensics.

6.2 Importance of Internship in Career Growth

The internship played a significant role in my academic and professional development by providing practical exposure to real-world cybercrime investigations. It strengthened my technical knowledge of cybercrime investigation, digital evidence collection, cyber laws, and the use of various cyber investigation portals. In addition to technical skills, I developed communication, teamwork, analytical thinking, problem-solving ability, time management, and professional ethics through regular interaction with police officers and observation of actual investigation procedures.

The practical learning experience improved my confidence and helped me understand the responsibilities and challenges involved in cybercrime investigation. It also enhanced my interest in pursuing a career in Cyber Security, Digital Forensics, and Cybercrime Investigation. Overall, the internship served as a valuable foundation for my future career by equipping me with the practical skills, professional attitude, and industry exposure required to work effectively in the field of cyber security.
